

# Recruitment rate stochasticity at the design stage of a clinical trial

Supervision by Malgorzata Roos

Pilar Pastor

## Why recruitment rates?

- Timely recruitment vital to the success of a clinical trial
- Inadequate number of subjects → lack of power
- Recruitment period too long → competing treatments
- Recruitment of patients varies at each stage
- Accrual = Cumulative Recruitment
- [Carter \(2004\)](#)

## Target Population

Target Population

## Eligibility

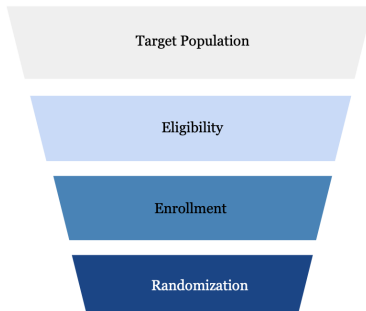

## Enrollment

## Randomization

## Statistical Analysis

## Patient Attrition

## Uncertainty

- **Aleatory**: randomness inherent and unpredictable
- **Epistemic**: arises from limited knowledge about parameters

Figure: Visualization of two types of uncertainty (Yang and Li, 2023)

## Models for Counts

Methods	Counts	Expectation	Variance	Aleatory	Epistemic
Expectation	$C(t) = \lambda t$	$\lambda t$	0	No	No
Poisson	$C(t) \sim \text{Po}(\lambda t)$	$\lambda t$	$\lambda t$	Yes	No
Negative Binomial	$C(t) \sim \text{Po}(\Lambda t); \Lambda \sim G(\alpha, \beta)$	$\frac{\alpha}{\beta}$	$\frac{\alpha(\beta+1)}{\beta^2}$	Yes	Yes

**Table:** Aleatory and epistemic uncertainty in accrual shown by different models for counts.

## Study

- Time  $t = 550$  days
- Recruitment Rate  $\lambda = \frac{\text{Counts}}{\text{Time}} = 0.591$

## Study

- Time  $t = 550$  days
- Recruitment Rate  $\lambda = \frac{\text{Counts}}{\text{Time}} = 0.591$
- Models for Counts:
  - Expectation:  $EC(t) = \lambda t = 0.591 \cdot 550 = 325$
  - Poisson:  $C(t) \sim \text{Po}(\lambda t)$
  - Negative Binomial:  $C(t) \sim \text{Po}(\Lambda t); \Lambda \sim G(\alpha, \beta)$

## Study

- Time  $t = 550$  days
- Recruitment Rate  $\lambda = \frac{\text{Counts}}{\text{Time}} = 0.591$
- Models for Counts:
  - **Expectation:**  $EC(t) = \lambda t = 0.591 \cdot 550 = 325$
  - **Poisson:**  $C(t) \sim \text{Po}(\lambda t)$
  - Negative Binomial:  $C(t) \sim \text{Po}(\Lambda t); \Lambda \sim G(\alpha, \beta)$

## Accrual at time point $t$

- **Expectation:**  $EC(t) = \underbrace{EC + \dots + C}_{t \text{ times}} = tEC = \lambda t$
- **Poisson:**  $\underbrace{Po(\lambda) + \dots + Po(\lambda)}_{t \text{ times}} = Po(\lambda t)$

## Negative binomial derived from Poisson-Gamma model (t=1)

Let  $C|\Lambda \sim \text{Po}(\Lambda)$  and  $\Lambda \sim G(\alpha, \beta)$

$$\begin{aligned} p(c) &= \int_0^\infty p(c|\lambda)p(\lambda)d\lambda \\ &= \int_0^\infty \frac{\lambda^c \exp(-\lambda)}{c!} \left[ \lambda^{\alpha-1} \exp(-\beta\lambda) \frac{\beta^\alpha}{\Gamma(\alpha)} \right] d\lambda \\ &= \frac{\beta^\alpha}{c! \Gamma(\alpha)} \int_0^\infty \lambda^{\alpha+c-1} \exp(-\lambda) \exp(-\beta\lambda) d\lambda \\ &= \frac{\beta^\alpha \Gamma(\alpha + c)}{c! \Gamma(\alpha) (\beta + 1)^{\alpha+c}} \underbrace{\int_0^\infty \frac{(\beta + 1)^{\alpha+c}}{\Gamma(\alpha + c)} \lambda^{\alpha+c-1} \exp(-(\beta + 1)\lambda) d\lambda}_{=1} \\ &= \beta^\alpha \binom{\alpha + c - 1}{\alpha - 1} \left( \frac{1}{\beta + 1} \right)^{\alpha+c} \\ &= \binom{\alpha + c - 1}{\alpha - 1} \left( \frac{1}{\beta + 1} \right)^c \left( \frac{\beta}{\beta + 1} \right)^\alpha, \quad C|\Lambda \sim \text{NBin} \left( \alpha, \frac{\beta}{\beta + 1} \right) \end{aligned}$$

## Study

- Time  $t = 550$  days
- Recruitment Rate  $\lambda = \frac{\text{Counts}}{\text{Time}} = 0.591$
- Models for Counts:
  - Expectation:  $EC(t) = \lambda t = 0.591 \cdot 550 = 325$
  - **Poisson:**  $C(t) \sim \text{Po}(\lambda t)$
  - **Negative Binomial:**  $C(t) \sim \text{Po}(\Lambda t); \Lambda \sim G(\alpha, \beta)$ 
    - $\alpha = 325$
    - $\beta = 1.5 \cdot 365$
    - $E\Lambda = \frac{\alpha}{\beta} = 0.591 = \lambda$

# Comparison between Poisson and Negative Binomial

# Comparison between Poisson and Negative Binomial

## Summary

- Theoretical models for **counts**
- Extended Carter's simulation to exact distributions

## Next steps

- Application to simulation on [Carter \(2004\)](#)
- Theoretical models for **time**
  - Theoretical
  - Application on [Carter \(2004\)](#)
- Shiny App
- Predictions using theoretical models developed on Daniore Nittas dataset of rates (cite?)
